

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method of inducing an insulin sensitizing or insulin mimetic effect in a tissue of a patient having Type II diabetes, the method comprising administering to the patient 4-hydroxyisoleucine of formula

and/or the lactonic form thereof.

2. (Previously Presented) The method of claim 1, characterised in that said 4-hydroxyisoleucine and/or lactonic form thereof exercises an insulin mimetic and/or insulin-sensitizing effect at the level of a peripheral target tissue of insulin.

3. (Previously Presented) The method of claim 1, characterised in that said 4-hydroxyisoleucine and/or lactonic form thereof reduces phosphatase activity associated with the signaling route of the insulin receptor, and/or stimulates PI 3-kinase activity on IRS-1 and/or IRS-2.

4. (Canceled).

5. (Previously Presented) The method of claim 1, characterised in that the 4-hydroxyisoleucine is presented in the form of its 2S, 3R, 4S isomer or the corresponding lactone.

6-12. (Canceled).

13. (Previously Presented) The method of claim 1, wherein administration of the 4-hydroxyisoleucine and/or lactonic form thereof reduces the need of the patient for exogenic insulin.

14. (Currently Amended) A pharmaceutical ~~Pharmaceutical~~ composition or a kit for the treatment of Type II diabetes, comprising both insulin and 4-hydroxyisoleucine of formula

and/or the lactonic form thereof.

15. (Currently Amended) A method of inducing an insulin sensitizing effect in a tissue of a patient having Type II diabetes, the method comprising administering to the patient 4-hydroxyisoleucine of formula

and/or the lactonic form thereof.

16. (Currently Amended) A method of inducing an insulin mimetic effect in a tissue of a patient having Type II diabetes, the method comprising administering to the patient

4-hydroxyisoleucine of formula

and/or the lactonic form thereof.

17. (Previously Presented) The method of claim 1, further comprising administering insulin to the patient.

18. (Previously Presented) The method of claim 1, wherein the 4-hydroxyisoleucine and/or lactonic form thereof is orally administered to the patient.

19. (Previously Presented) The method of claim 1, wherein the 4-hydroxyisoleucine and/or lactonic form thereof is administered to the patient two times per day.

20. (Previously Presented) The method of claim 1, wherein the 4-hydroxyisoleucine and/or lactonic form thereof is administered to the patient three times per day.

21. (Previously Presented) The method of claim 1, wherein the 4-hydroxyisoleucine and/or lactonic form thereof is administered in the form of a capsule.

22. (Previously Presented) The method of claim 1, wherein the 4-hydroxyisoleucine and/or lactonic form thereof is administered in the form of a tablet.

23. (Currently Amended) A method of treating Type II diabetes by inducing an insulin sensitizing or insulin mimetic effect in a tissue of a patient in need thereof, the method comprising administering to the patient 4-hydroxyisoleucine of formula

and/or the lactonic form thereof.

24. (New) A method of treating Type II diabetes by inducing an insulin-sensitizing effect in a tissue of a patient in need thereof, the method comprising administering to the patient the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine of formula

25. (New) The method of claim 24, further comprising administering insulin to the patient.

26. (New) The method of claim 24, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is orally administered to the patient.

27. (New) The method of claim 24, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered to the patient once a day.

28. (New) The method of claim 24, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered to the patient two times per day.

29. (New) The method of claim 24, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine and is administered to the patient three times per day.

30. (New) The method of claim 24, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered in the form of a capsule.

31. (New) The method of claim 24, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered in the form of a tablet.

32. (New) The method of claim 24, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered in the form of a solution.

33. (New) The method of claim 24, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered in a powder form.

34. (New) A method of treating Type II diabetes by inducing an insulin mimetic effect in a tissue of a patient in need thereof, the method comprising administering to the patient the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine of formula

35. (New) The method of claim 34, further comprising administering insulin to the patient.

36. (New) The method of claim 34, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is orally administered to the patient.

37. (New) The method of claim 34, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered to the patient once a day.

38. (New) The method of claim 34, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered to the patient two times per day.

39. (New) The method of claim 34, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine and is administered to the patient three times per day.

40. (New) The method of claim 34, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered in the form of a capsule.

41. (New) The method of claim 34, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered in the form of a tablet.

42. (New) The method of claim 34, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered in the form of a solution.

43. (New) The method of claim 34, wherein the (2S, 3R, 4S) isomer of 4-hydroxyisoleucine is administered in a powder form.
